

# AutoSave!

## Our way of looking after tomorrow... today

The AutoSave system automatically starts in the economy, energy conservation mode, immediately reducing your power requirements by

half, exactly the same as switching off 10 x 60W light bulbs!

If, at any time, more power is needed, one push of the Hi switch gives you literally twice as much which can sometimes be almost too much but fear not, a second push of the switch and you will

automatically return to economy again. Simple green technology and yours to command.

### HepaFlo Filtration System

New HepaFlo technology brings with it new standards of performance, higher efficiency, increased capacity and greater cleanliness and convenience.

Kit AA1 - A superb, professional, Economy Nozzle, Nutex, long life kit.

NuCable cable replacement.

# ProSave... ProSave... ProSave...

The three model contractor's range all incorporate common design features but vary in capacity in order to provide for contracts and areas of differing size.

PSP180A

All models in the blue range incorporate our high performance TwinFlo, two stage vacuum motor turbine linked to our AutoSave energy conservation system, allowing the machine to operate automatically at the 600W Eco setting or, equally, at the 1200W high performance standard as required. All ProSave models incorporate our unique cable tidy and plugged mains cable system, extending cable life, adding user convenience and allowing for simple "unqualified" cable replacements. The power head design incorporates our new NST sound reduction system which, together with the 600W Eco setting, provides substantially lower noise levels. All ProSaves use our HepaFlo high efficiency filter bags which substantially enhance performance and provide for quick, convenient and clean emptying when full.
